

BUSHMASTER

GROWTH & BLOOM

Bushmaster Growth and Bloom has been designed specifically for the outdoor enthusiast.

Bushmaster was designed for hydroponics plants grown in a soil medium either grown under lights or outdoors. For Hydroponic plants grown in a soil medium Bushmaster is best used daily for six days a week and given just water on the seventh day to flush any build up of salts in the soil.

Bushmaster can also be used on all garden plants weekly during summer and fortnightly during winter at the rates described. As the names suggest growth is for leaf and stem growth and Bloom is designed to promote flowing and is a fantastic product for all flowing plants.

DIRECTIONS FOR USE :

GROWTH: For hydroponically grown plants using a soil medium apply 6-8 ml per litre of water daily for 6 days and plain water on day 7. For all other plants use 60-80 mls per 10 litres of water weekly

BLOOM : For hydroponically grown plants using a soil medium apply 5 ml per litre of water daily for 6 days and plain water on day 7. For all other plants use 50 mls per 10 litres of water weekly.

Use 2-3 litres of dilutes solution on mature plants and less, according to plant size.
