

POWER ACTIVE

Power Active is a shelf stable liquid which contains beneficial microbes in a suspended animation. As well as the microbes, **Power Active** contains a specialised nutrient spectrum for the microbes. This nutrient ensures that the microbes multiply rapidly and thrive after being introduced.

These microbes release hormones, enzymes and vitamins which helps suppress disease and keep your system healthy.

This will mainly colonize areas around roots and substrates.

We are able to keep these microbes in liquid formation by using a specialized stabilizer, this stabilizer greatly reduces the amount of water that is able to be taken up by the microbes thus inducing a state of suspended animation.

This technique is unique to **Nulife Technologies**

Power Active is not only superior to the dry pelleted bacteria bit is more cost effective. Once again giving you an advantage in your crop production through quality and price.

The liquid has quite a pungent ammonia smell when in the bottle. This is caused by the stabilizer and indicates that the **Power Active** is still able to be used.

Directions for Use : Add 1ml of the culture to every litre of nutrient solution. Repeat every 3 weeks or whenever solution is changed.
