

## **ROSE MAGIC**

**ROSE MAGIC** is a specially designed **complete** Rose food. It is the result of over 30 yrs of horticultural experience in commercial horticulture by our Agronomist. This is the same suite of nutrients used by the best commercial rose growers and is now available to the home grower.

**ROSE MAGIC** is **guaranteed** to bring extra vigour to your bushes and extra vibrancy to your flowers.

How can we do this ?

We have accomplished this in two parts. Firstly, in a technological breakthrough we combined the major elements N;P;K and Magnesium with **CALCIUM**. Normally , you wont find calcium in a blend with all the other major elements.

The second part of the equation is a unique and especially targeted blend of chelated trace elements specifically designed for roses.

The result? Simply the **BEST!** This is the most complete liquid rose food on the market today.

**ROSE MAGIC** contains:

**Nitrogen** – for leaf growth and protein synthesis

**Phosphorous** – for root development and extra flower colour

**Potassium** – for strong vigorous stems and flowers

**Calcium** – the building blocks in the construction of cell walls. Calcium brings increased stem strength, increased disease resistance through thicker leaves and increased drought resistance.

**Magnesium** – a central component in chlorophyll, the plants food factory. Maintains green leaves and brighter flowers.

**Trace Elements** – Manganese, Boron, Zinc, Copper, Silica and Molybdenum. These are essential for all of the plants growth processes. The trace elements have been chelated to enhance uptake by the plant.

**DIRECTIONS FOR USE :** Use 60 ml ( 4 caps ) per 10 litre watering can. Apply approximately 1 litre per fully grown and flowering plant once or twice a week. Apply less in winter and full rate in summer. Apply less to smaller plants. **Less fertiliser more often is better than a lot at one time.**

**ROSE MAGIC** may also be used as a foliar fertiliser. Use at one quarter strength and wet the foliage thoroughly. Do not use if temperature above 30C are expected within two hours of spraying. Continuous use of **ROSE MAGIC** will build soil fertility and enhance microbial action within the soil.
